PRODUCTION IMPACT

10+ years running production platforms	-70% release lead time (GitLab CI/CD templates)	99.9% uptime through on-prem → AWS migration	-25% AWS spend via right-sizing	60+ versioned Terraform modules	200+ production releases a year
---	--	---	------------------------------------	------------------------------------	------------------------------------

SUMMARY

Senior Multi-Cloud DevOps Engineer with **10 years** building, securing and operating enterprise **CI/CD pipelines and Kubernetes platforms** across **AWS, Azure and GCP** for **banking, insurance, life sciences and telecom**. I design reusable pipelines with built-in **DevSecOps gates** (SAST, SCA, secret & image scanning, SBOM, licence checks), run **GitOps** delivery with **Argo CD and Helm** on **EKS, AKS and OpenShift**, provision everything as code with **Terraform and Ansible**, and make systems observable with **Datadog, Prometheus, Grafana, OpenTelemetry and CloudWatch**. Known for zero-downtime migrations, audit-ready platforms, and turning risky releases into boring, automated ones.

TECHNICAL STACK

Cloud	AWS (primary): EKS, EC2, ECS, ECR, S3, RDS, VPC, IAM, KMS, WAF, Lambda, Route 53, SQS/SNS · Azure: AKS, ACR, VNet, Key Vault, Azure Monitor · GCP: GKE, Compute Engine, Cloud Storage, IAM
CI / CD	GitLab CI (primary), Jenkins, GitHub Actions, Maven, Tomcat, Git; reusable templates, artifact promotion, approval gates, automated rollback
GitOps & Delivery	Argo CD, Helm, GitOps workflows, environment promotion, zero-downtime rollouts
Containers & K8s	Docker, Podman, Kubernetes, Amazon EKS, Azure AKS, OpenShift; RBAC, IRSA, HPA, Ingress (NGINX / Traefik), cluster upgrades
Infrastructure as Code	Terraform (60+ modules, remote state, workspaces), Ansible, AWS CloudFormation
Observability & SRE	Datadog, Prometheus, Grafana, OpenTelemetry, CloudWatch, Splunk, New Relic, AppDynamics; SLOs, alerting, runbooks, self-healing
DevSecOps & Artifacts	SonarQube (SAST), SCA, secret & image scanning, SBOM, licence compliance; JFrog Artifactory, Nexus, Amazon ECR
Networking & Edge	Traefik, NGINX, AWS ALB/ELB, TLS certificate lifecycle automation
OS, Code & Data	Linux (RHEL, Ubuntu, CentOS), Python, Bash, Go, PowerShell, PostgreSQL
AI & Productivity	Amazon Bedrock (RAG prototypes), GitHub Copilot, Claude for IaC & pipeline acceleration

RELEASE HISTORY — EXPERIENCE

Senior Consultant — Cloud & DevOps · Deloitte India

Mar 2025 — Present

v4 · current

Pharmaceutical & Life Sciences (APAC) · Platform automation & DevSecOps

- Designed reusable **GitLab CI/CD** templates with artifact promotion, approval gates and automated rollback, **cutting release lead time by 70%** and eliminating manual deployment errors.
- Made **SAST (SonarQube), secret scanning, image scanning, SBOM and licence checks** mandatory pipeline gates, closing **40+ audit and compliance findings** across **12+ AWS accounts**.
- Run OCI images through **JFrog Artifactory and Amazon ECR** with tag policies, promotion workflows and vulnerability thresholds before every environment promotion.
- Authored **60+ versioned Terraform modules** (remote state, per-environment workspaces) plus CloudFormation across **3 APAC regions**.
- Automated TLS certificate lifecycle, IAM hardening, KMS encryption and AWS WAF rules; standardised deployment patterns adopted by **6+ application teams**.
- Prototyped **GenAI knowledge assistants on Amazon Bedrock with RAG**; accelerated delivery ~30% using GitHub Copilot and Claude.

Technology Lead — DevOps / SRE · Synechron Technologies

Jul 2023 — Jan 2025

v3 Banking & Financial Services · Cloud migration & container platform

- ▶ Led the **on-premises** → **AWS migration** of business-critical banking applications, architected for HA and autoscaling, **sustaining 99.9% uptime** post-migration.
- ▶ Containerised **20+ legacy workloads onto Amazon EKS**: Helm releases, Ingress (NGINX/Traefik), HPA, RBAC, IRSA, Secrets/ConfigMaps and **zero-downtime cluster upgrades**.
- ▶ Introduced **Argo CD GitOps**, moving deployment frequency **from weekly to daily**; all infrastructure provisioned as code with Terraform and CloudFormation.
- ▶ Built SonarQube quality gates into **Jenkins and GitHub Actions** pipelines used by 6+ teams.
- ▶ Delivered an observability stack (CloudWatch, Prometheus/Grafana, Splunk, New Relic, AppDynamics) with **Lambda-driven self-healing** that significantly reduced MTTR.
- ▶ Right-sized compute and storage, **cutting AWS cost by 25%**; enforced IAM least privilege, KMS and WAF; automated backup and DR procedures.

EKS · Helm · Argo CD · Jenkins · GitHub Actions · Terraform · Prometheus · Grafana · Splunk · New Relic · AppDynamics

Senior Associate Consultant — DevOps · Infosys

Apr 2022 — Jan 2023

v2 Telecommunications · Continuous delivery platform

- ▶ Built and tuned **30+ Jenkins pipelines** integrated with GitHub, Nexus and Maven, fully automating builds for teams across **4 time zones**.
- ▶ Operated Docker and Kubernetes platforms: container networking, namespaces, clustering and scaling of orchestrated workloads.
- ▶ Deployed and monitored AWS infrastructure (EC2, S3, ELB, Auto Scaling, VPC) with CloudWatch alarms and least-privilege IAM.
- ▶ Designed the branching strategy and release management across Dev, QA and Production.

Jenkins · GitHub · Nexus · Maven · Docker · Kubernetes · AWS · CloudWatch

DevOps Engineer (promoted from System Administrator) · Wipro

Aug 2016 — Mar 2022

v1 Insurance · Build, release & infrastructure automation (6 years)

- ▶ Owned end-to-end build and release across Dev, QA, Performance and Production, supporting **200+ production releases a year** with 24×7 on-call; earlier ran RHEL/Windows infrastructure, networking and SAN backups as System Administrator.
- ▶ Implemented Jenkins CI/CD with Docker and Kubernetes; authored manifests (Deployments, ReplicaSets, DaemonSets) and managed cluster setup and scaling.
- ▶ Automated provisioning with **Ansible, Bash and Python**; bootstrapped complete DevOps toolchains on Linux for newly onboarded projects.
- ▶ Built RESTful **Go microservices** streaming large PostgreSQL datasets between internal systems and third-party APIs; Tomcat-hosted Java deployments.

Jenkins · Docker · Kubernetes · Ansible · Go · PostgreSQL · Tomcat · RHEL

HOW I RUN PLATFORMS

- ▶ **Everything as code**: infra, pipelines and policies versioned, reviewed, reproducible.
- ▶ **Security as a gate**: scans, SBOMs and licence checks block promotion automatically.
- ▶ **SLO-driven ops**: GitOps delivery, user-impact alerts, runbooks and self-healing.

EDUCATION & MORE

B.Tech · Sree Kavitha Engineering College, Khammam · 2015 | Interactive twin of this résumé: ravichandra-devops.github.io, a voice-narrated 3D portfolio with **Piku**, an AI assistant that answers recruiters' questions by voice or chat.
